

Healthcare Tracker Mobile Application – Frontend Design Report

Overview

Healthcare Tracker is a mobile application designed to help users monitor and maintain their health-related information in one place. The application provides a user-friendly interface for tracking key health metrics, maintaining health records, and receiving wellness reminders.

Purpose

The primary objective of the application is to support users in organizing and monitoring their personal health data. The app serves as a digital health diary and wellness companion rather than a medical diagnostic tool.

Key Screens Identified

1. Login Screen – Email and password authentication, password recovery, and login access.
2. Health Disclaimer Screen – Provides usage limitations and medical disclaimers.
3. Home Dashboard – Displays heart rate records, health diary, blood pressure, blood sugar, weight & BMI, water reminders, and history tracking.

Main Features

- Health metric tracking and record management
- Digital health diary
- Heart rate monitoring interface
- Water intake reminders
- Historical health data viewing
- Simple and intuitive navigation

User Experience Design

The interface follows a clean and minimal design approach with easy navigation, health-focused dashboard organization, and accessibility for users with varying technical skills.

Conclusion

The Healthcare Tracker frontend design presents a practical solution for personal health monitoring. The application emphasizes health awareness and record keeping through an organized dashboard and tracking tools while clearly communicating that it is intended for informational purposes and not as a substitute for professional medical advice.
